DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Benoit Castel on 07/15/08.

In the Claims:

Claim 1:

line 8: delete "capable of tilting and fixing", add -- configured to tilt and fix --

Claim 2:

line 1: delete "A wireless", add -- The wireless --

Claim 3:

line 1: delete "A wireless", add -- The wireless --

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

Patentability seen in, although not limited to Independent Claim 1: A wireless control transmitter for remotely controlling a body of a wireless apparatus comprising a grip to be grasped by the hand of a user, a throttle trigger level slidably protruding a

Art Unit: 3714

lower surface of the controller along a head portion of the grip, wherein the throttle trigger controls forward and backward movement of the controlled body. The transmitter further comprising a steering arranged on the upper surface of an end portion of the controller and controls the right and left turns of the controlled body. The steering wheel furthermore configured to tilt and fix its axial position toward a particular direction with respect to the controller. The closest prior art of record does not teach or fairly suggest the claimed method in combination. Marceau (US 5,094,646) discloses wireless transmitter comprising a grip with a throttle trigger located at the head portion of the grip, and a steering means for turning left and right located at the upper surface of the controller (Figs. 1-8). However, Marceau excludes the remote controller comprising an actual steering wheel located at the upper surface of the controller and more particularly a steering wheel configured to **tilt and fix its axial position** toward a particular direction with respect to the controller. Mukaida (US 2004/0137936) discloses a discloses wireless transmitter comprising a grip with a throttle trigger located at the head portion of the grip for controlling forward and backward movement, and a steering wheel for turning left and right located both sides of the controller, wherein the steering in use protrudes and the dormant steering wheel sinks into the controller (Figs. 2-4). However, Mukaida excludes a steering wheel configured to **tilt and fix its axial position** toward a particular direction with respect to the controller.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ogihara (US 7,029,363) teaches a remote controller with a steering that attaches to either side of the controller.

Lai (US 2002/0196174) teaches an ergonomic remote controller.
